Kong Coleus As Pot (Gift) Plant

Kong Coleus is very shade tolerant and has a very long shelf life. In the picture above, the plant was moved to indoor conditions with room temperature about 68°F (20°C) and light level about 100 f.c. for 5 weeks. The plant still looked fresh without stretching. If the plant is cared for and does not wilt, Kong Coleus can easily last 8 to 10 weeks or longer.
