GROWING DIVINE TIPS FOR YOUR SUCCESS

Find detailed Divine culture in the **Product Information Guide** or at panamseed.com.

Plug crop time
 288-cell: 5 weeks
 128-cell: 6 weeks

Transplant to finish

Container	288-cell: Plants per pot	Weeks*
306 or 1801 packs	1	6-7
4.5-in. (10.5-cm) pot, quart	1	7-8
6-in. (15-cm) pot, gallon	1-3	8-9
10-in. (25-cm) basket	3-4	8-9
12-in. (30-cm) basket	4-5	8-9

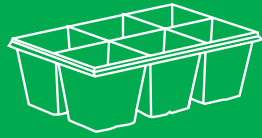

*Weeks to finish based on growing at 72°F (22°C) ADT.

Stage	Key Tips	Temperature	Moisture	Feed	Height Control
Germination (Stage 1)	<ul style="list-style-type: none"> • Allow 5-8 days. • Sow 1 seed per cell in 288 or larger trays; vermiculite cover optional. • Watch for 80% radicle emergence before removal from Stage 1. 	74-77°F (23-25°C)	Level 5	–	–
Plug Stage (Stages 2-4)	<ul style="list-style-type: none"> • Cycle moisture levels – constantly saturated media causes rapid stem elongation and New Guinea Impatiens cannot tolerate wilt. 	70-74°F (21-23°C)	Levels 3-5	50-75 ppm N constant liquid fertilizer; constant 8-10 ppm phosphorus to avoid foliage purpling	At 3-4 weeks from sowing: Daminozide spray 1,250-2,500 ppm with follow-up as high as 3,750 ppm as needed, or Paclobutrazol spray 1-2 ppm. Negative DIF and DROP are also effective for height control.
Finish Stage**	<ul style="list-style-type: none"> • Pinching delays flowering and is not required. • Feed plants moderately. • Overfeeding leads to lush, leafy plants at the expense of flowers. • Maintain pH above 5.8, EC below 1.5 mS/cm. 	68-73°F (20-23°C)	–	50-150 ppm N constant liquid fertilizer; constant 12-15 ppm phosphorus	If needed: Paclobutrazol spray 2-5 ppm or drench 0.125-0.25 ppm. May not need PGRs grown at lower EC, with moisture cycling and negative DIF or DROP.

**Finish at ADT between 68 and 73°F (20 and 23°C). Flowering is delayed under cooler temps and above 85°F (29°C). Divine is day-neutral. DLI of ≥10-15 moles·m⁻²·d⁻¹ increases number of flowers and branches per plant.
