

Javelin Juncus PGR Response

**Bonzi 30 ppm
Spray**

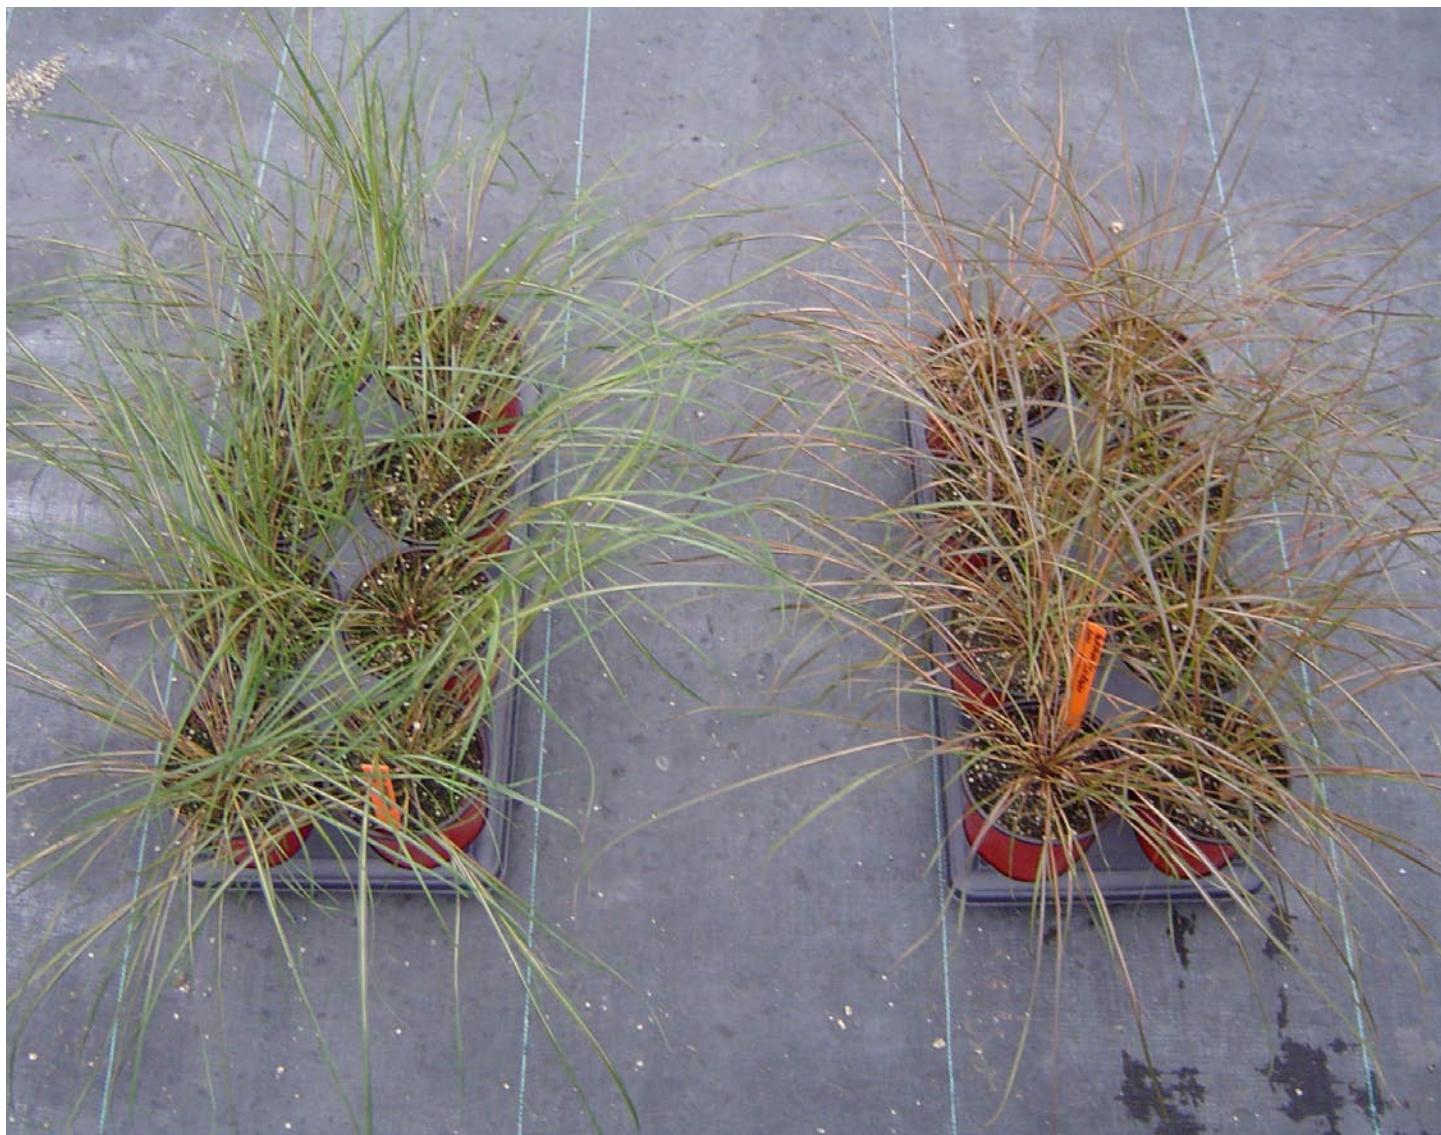

Control

PGRs are not necessary for Juncus; however, a Bonzi spray at 30 ppm 2 weeks after transplanting is beneficial to reduce leaf bending by making the plants more compact and the leaves stiffer.

PanAmerican Seed Culture Research

Sirocco Stipa Coloration

Sirocco Stipa coloration is better under cool conditions with high light. In the photo, both trays of plants were grown inside a greenhouse at 59 to 75°F for 10 weeks. The plants on the right were moved outside to full sun and cooler temperature (50 to 55°F nights) conditions for 2 weeks, resulting in better coloration.
