

PanAmerican Seed Culture Research

We do not recommend these two cell sizes.

Sown on the same day, Purple Majesty Ornamental Millet grows fastest with direct sowing to the final container (right pot). If sown into plug trays, cell size 128 or larger is recommended. Using plug sizes smaller than 128 restricts plant growth and adds about 2 weeks to the crop time.

PURPLE MAJESTY MILLET PGR RESPONSE

Plant growth regulator application occurred at 4 and 6 weeks after sowing

When Purple Majesty Ornamental Millet is directly sown into the final container, 2 applications of a Bonzi 5 to 10 ppm drench at 4 weeks and 6 weeks from sowing are recommended. One application will make plants slightly fuller (middle pot) and 2 applications will make plants fuller and shorter (left pot).
