

Plectranthus PGR Response

Silver Crest in 4.5" Pot

B9 2500ppm

Control

One to two applications of B-Nine at 2,500 to 5,000 ppm are efficient for Silver Crest shoot length control (left pot). The first application can be done 2 weeks after transplant. If necessary, repeat 2 weeks later. Avoid Cycocel and Bonzi, as Cycocel could cause phytotoxicity and Bonzi could stunt the plant.
