

## Culture Research

PGRs are generally not needed for Gryphon begonia. If necessary, a spray of B-Nine at 2,500 ppm or tank mix of B-Nine 2,500 ppm and Cycocel 300 ppm can be used at 2 weeks after transplanting. NOTE: The tank mix formula is more active. Avoid using Cycocel alone as it can cause phytotoxicity. Use caution with Bonzi, Topflor and Sumagic as they can stunt plants.

## Culture Research

Gryphon begonia is a foliage plant, but plants could flower when grown under a daylength of 11 hours or shorter. Under daylengths longer than 11 hours, flowering will be significantly delayed or plants will never flower.
