Effect of B-Nine on Debonair Black Cherry & Sophistica Blackberry Petunia Coloration

B-Nine could wash out the black color a little bit to become more cherry tone (top photo, right tray, yellow box) or cause some yellow color breaks (bottom photo). We recommend using Bonzi 2 to 3 ppm drench or Topflor 1 to 2 ppm at 10 days after transplant instead of B-Nine.

The Effect of PGRs on Sophistica Lime Bicolor Pattern

B-Nine 5000ppm Spray

Control

The flower pattern of Sophistica Lime Bicolor petunia can be affected by B-Nine treatment. B-Nine spray can bleach out the rose color and makes the flowers a much lighter color (left tray in photo). The other PGRs such as Bonzi, Sumagic and Topflor have been tested and did not show the same effect as B-Nine.
