ANNUALS CULTURE

INTRODUCTION

To determine the effects of EthylBloc prior to shipping and PGR response for Abutilon.

Abutilon

Effects of EthylBloc, published 2017

PanAmericanSeed.

ANNUALS CULTURE

CONCLUSION

Treating with EthylBloc before or during shipping will prevent flower shrink and drop. Image shows the difference between treated and untreated plants after exposure to 1ppm ethylene for 24 hours.

ANNUALS CULTURE

CONCLUSION

For small pots (3.5 inch), space on 6 inch centers as soon as the foliage touches the sides of the pot to achieve the best height control and branching (left pot). If grown pot-tight (middle pot), 5ppm Bonzi spray 2 to 3 weeks after transplanting is recommended.
