Portulaca Photoperiod Response

Happy Hour Portulaca flowering will occur at a photoperiod as low as 10 hours 30 minutes with a non-rosette habit. This is 30 minutes less than Margarita, which means that Happy Hour can be sown 2 weeks earlier than Margarita.

Culture Research

Portulaca Photoperiod Breakthrough!

Portulaca grandiflora is unusual. Minimum critical photoperiod must be maintained from sowing through entire crop production to avoid rosetting, stalling growth and impeding flower development. Happy Hour has the shortest minimum photoperiod of any “bush” habit portulaca...10.5 hours!
