

## Petunia (Spreading) Tidal Wave® F<sub>1</sub> Series

Annuals Culture (revised 11/27/18)

(*Petunia x hybrida*)

### Big, bold 3D colour!

Extend your season with this strong finisher – grown and marketed in 8-in./20-cm pots and baskets, Tidal Wave is the “go-to” for pros and home gardeners looking for fresh, fast colour. Hedge, vine or impressive groundcover – Tidal Wave does it all! These fast-fill plants spread out across big spaces, and they crawl along and over walls and fences.

**Plug crop time:** 5 to 6 weeks

**Transplant to finish:** Spring 6 to 8 weeks, Summer 4 to 7 weeks

- Tallest and most vigorous of the Wave petunia family, Tidal Wave plants super-size colour into big spaces.
- Excellent landscape performer with terrific recovery from rain. The plants resist lodging, so they won't fall open and expose a bare centre like other petunias can.
- Recommended in Wave branded packaging: 8-in./20-cm pots, hanging baskets.

**Height, spread and spacing:** Growth habit is based on how closely plants are placed – the closer the spacing, the taller the plants.

- Spaced a minimum of 12 in./30 cm apart, Tidal Wave petunias form a dense, mounded hedge, 16 to 22 in./41 to 56 cm tall.
- Grown in a restricted space with support, they grow an extra 2 to 3 ft./61 to 91 cm upward, like a vine.
- Spaced up to 24 in./61 cm apart in the garden, the plants make a floriferous groundcover, spreading up to 5 ft./1.5 m across per plant.

### Finishing Key Tips

Daminozide spray of 3,500 to 5,000 ppm 7 to 10 days after transplant promotes branching and controls early stretch. An alternative to paclobutrazol drench, flurprimidol (Topflor) can be used at 2/3 the rate of paclobutrazol. Can be grown as low as 50°F (10°C). Crop timing is related to average temperature when grown under proper daylength. Plants will take longer to flower when grown in cooler conditions. Recommended DLI range of 12 to 20 mol·m<sup>-2</sup>·d<sup>-1</sup>. Cold-Durable Varieties: Red Velour, Silver
