Propagation Key Tips

Annual program for late Summer flowering: provide 10-hour short days. Bulk from 2 true leaves (approximately 4 weeks after sowing) until 10 true leaves for more uniform flowering. Step up 288 plugs into 72 or 50 cell, maintaining 10-hour short days.

For forcing info: See Perennials Forcing Guide.

Growing on to Finish

Growing on Temperature	Target Media pH/EC	Fertilizer	Daylength
(day) 65-68°F (18-20°C) (night) 60-65°F (16-18°C)	5.8-6.5 pH 1.2-1.5 mmhos/cm	175 to 225 ppm N - 1.2 to 1.5 EC	Short Day-Long Day

Daylength Notation

Best plant structure comes under Short Day conditions (12 hours or less) until 10-leaf stage, then Long Day.

For forcing info: see Perennials Forcing Guide.

Overwinter	8"/2 Gallon	3-5 (ppp)	32-34 (weeks)	Summer	paclobutrazol 20-30 ppm Spray

Fertilizer Notation

Use 100 to 125 ppm liquid N balanced fertilizer with every irrigation; or 200 to 300 ppm N balanced fertilizer as needed.

Common Problems

Insects: Aphids, Whiteflies Disease: Septoria Leaf Spot is the primary disease observed on Black-eyed Susan. Other pathogens that may be observed on Rudbeckia include Botrytis, Cercospora, Downy Mildew, Powdery Mildew, Phytophthora, Pseudomonas, Pythium and Rhizoctonia

Bulking Strategy

See Quick Study Forcing; give short days (less than 12 hours) from 2 to 10 true leaves (approximately 12 to 14 weeks), for plan for week 35 sales. For forcing info: See Perennials Forcing Guide.

Finishing Key Tips

Relatively high feeder. Use long day or night interruption to finish early pottings or use vernalized plugs. Prevent Mg and Fe deficiency. Monitor for Botrytis and Downy Mildew. High light and good ventilation are beneficial. For Autumn forcing info: See Perennials Forcing Guide.
