

Dianthus Dash™ F₁ Series

(*Dianthus barbatus*)

Annuals Culture (revised 08/19/24)

Plug crop time: 4 to 5 weeks

Transplant to finish: Late Spring/ early Summer, 9 to 10 weeks; late Summer/Winter, 11 to 12 weeks

- The best *D. barbatus* for premium container sizes.
- Well-branched and moderate vigour for fast fill in early Spring and Autumn production. Responds well to PGRs where needed.
- Sweet William-type dianthus requires no vernalisation for flowering.
- Produces masses of fragrant blooms.
- Low-energy crop can be grown cool for cost savings.

Fertiliser Notation

Starting a week after transplant, apply fertilizer at a rate of 175 to 225 ppm N once a week from nitrate-based fertilizer with low phosphorus.

Chemical Sensitivity

Avoid using fungicides containing the active ingredient Azoxystrobin, such as Heritage, as this can cause phytotoxic symptoms in Dash Dianthus.

Common Problems

Insects: Thrips, Aphid, Mites Diseases: Powdery Mildew

Finishing Key Tips

Dash dianthus has a naturally compact plant habit and good basal branching when compared to other barbatus-type dianthus, making it more suitable for container production. Provide 65 to 75°F (18 to 24°C) day temperatures and 60°F (15°C) night temperatures for the first 2 weeks of greenhouse production to establish the plants. Finish at 60 to 70°F (15 to 21°C) days, with nights in the low 50°Fs (11 to 12°C). Lower temperatures can be tolerated as plants mature.
