

Euphorbia Glamour F₁

(*Euphorbia graminea*)

Annuals Culture (revised 12/12/24)

Plug crop time: 3 to 4 weeks

Transplant to finish: 5 to 8 weeks

- The best variety for in-ground performance.
- Early to flower, with the vigour to hold up to a range of weather challenges.
- An exceptional choice for a 'Baby's Breath Gypsophila' like application in the landscape.
- Use with vigorous plants for a stunning combination in-ground, or weave like a cloud-like hedge through more bold-textured annuals.

Propagation Key Tips

Avoid temperatures below 62°F (16°C), as cooler temperatures cause foliage yellowing. Plug sizes 128 or larger should be sown at 2 seeds per cell. Apply daminozide spray for height control, with the first application at true leaf stage, followed by a second application 7 days later. An alternative to daminozide is an application of paclobutrazol sprench at 2.5 ppm or drench at 0.25-0.5 ppm at radicle emergence. This has been effective in controlling hypocotyl stretch. Glamour is vigorous, so this is a key tip. Follow either of these treatments with a single daminozide spray of 2,500 to 5,000 ppm in Stage 3.

Growing on to Finish

Growing on Temperature	Target Media pH/EC (1:2)	Fertiliser	Daylength

Crop Scheduling

Container Size	Plugs/Pot	Crop Time	Season	PGR
5"/6"/1 Gallon/15 cm	1-2 (ppp)	5-8 (weeks)	Spring	daminozide 2,500-5,000 ppm Spray
8"/2 Gallon/20 cm	2 (ppp)	6-8 (weeks)	Spring	daminozide 2,500-5,000 ppm Spray

Finishing Key Tips

Do not grow plants at temperatures below 62°F (16°C). Stretched plugs can be planted deep for better habit management. Pinching is not necessary. Daminozide may delay full flowering, but it is helpful early on in developing good branching. If starting with a daminozide spray for habit management, consider a paclobutrazol spray (10 ppm) or a low rate drench (1-2 ppm) to finish. Warmer temperatures and higher light levels can significantly reduce crop times.
