Cell Pack	1 (ppp)	3-4 (weeks)	Spring	-

Fertiliser Notation

Starting 1 week after transplant, apply fertilizer at rate of 100 to 175 ppm N and 0.7 to 1.2 mS/cm using predominantly nitrate-based fertilizer with low phosphorus. Maintain the media EC at 1.0 to 1.5 mS/cm and pH at 6.2 to 6.5. For constant fertilizer program, fertilizer can be applied at a rate of 75 to 100 ppm N 0.5 to 0.7 mS/cm while maintaining the above recommended EC and pH ranges.

Common Problems

Insects: Aphids, Mites, Whiteflies Diseases: Damping off in the seedling stage

Finishing Key Tips

Maintain soil pH of 6.2 to 6.5 to avoid iron toxicity. Hot Pak is bred to grow and flower under higher temperatures and humidity than other French Marigolds; thus, a wider range of finishing conditions is possible.
