### Vernalisation

Yes - Low vernalisation requirement, only 4 weeks at 50-55°F (10-13°C) from 5 to 6 true leaves onwards.

### Juvenility

Minimum 5 to 6 true leaves

### Propagation Key Tips

Maintaining moisture above level 3 in Stage 1 and 2 is critical for germination and seedling development. Responsive to weekly ancymidol 2 ppm spray or ancymidol 2 ppm/daminozide 2,500 ppm tank mix beginning 3 weeks from sowing.

## Chemical Sensitivity

Cycocel causes phytotoxicity

## Bulking Strategy

For best and richest flowering, allow plants 3 to 4 weeks to bulk after transplant; best in the cooler season.

## Finishing Key Tips

Avoid flowering beneath the foliage in very short natural daylength period. When producing under natural daylength shorter than 11 hours, 15 minutes during flower development stage (about 4 weeks from your target sales date), flowers could hide beneath foliage. Supplemental long day lighting (night interruption from 10 pm to 2 am or 16-hour daylength extension) will achieve flower stem elongation.
